

## **Invasive species:**

species that are not native to a particular ecosystem and whose introduction causes or is likely to cause harm to the economy, environment, or human health.

## **Invasive species pose a threat to:**

- Agricultural lands
- Biological diversity
- Livestock pastures
- Natural areas and landscapes
- Wildlife and their habitat
- Cultural and other resources

Nationally, millions of acres of land and water are affected by invasive plants, and thousands of invasive plant species have established populations in the U.S.
