

Proposals

The CDI has provided funding support for many products and activities. Through the annual CDI proposal process, funds have been awarded for projects focusing on data integration for interdisciplinary research, innovative data management, and potentially cutting edge technology. The CDI supports new and ongoing projects that promote data integration and:

- Focus on targeted efforts that yield near-term benefits to Earth and biological science
- Leverage existing capabilities and data
- Implement and demonstrate innovative solutions (e.g. methodologies, tools, or integration concepts) that could be used or replicated by others at scales from project to enterprise
- Preserve, expose, and improve access to Earth and biological science data, models, and other outputs
- Develop, organize, and share knowledge and best practices in data integration

Eligibility:

Any USGS Mission Area, Program, Center, Office or duty station and their partner(s) are encouraged to apply. However, all proposals must have a USGS employee as a principal investigator.
