

Technology Stack Working Group (TSWG)

Description: A group learning about the "stack" of technology that can be used to promote the management and use of data.

Point Of Contact: Rich Signell, rsignell@usgs.gov

Meetings: Usually the 2nd Thursday of each month from 3-4pm ET, combined with the ESIP Tech Dive Series ([More meeting information](#))

Active subgroups: [Connected Devices Working Group](#); [Structure from Motion \(SfM\) Community of Practice](#)

Introduction

This working group ([members](#)) for CDI concerns a broadly defined and broadly applicable set of technology (the "stack of technology") that can be used to promote the ability of project-level workers to manage and use data and processing services and tools that are readily found and used by others. Part of this effort is to promote interoperability between individual services in order to help scientists pursue more integrated science.

Technology Road Map

This is a starting point for technologies this group will be addressing and a wiki index for the documentation we will generate as a result of presentations and other activities with the group.

Topics of Interest

Members can submit presentation and discussion ideas for biweekly meetings of the working group.

Membership

Membership is open to anyone. If you are interested in joining this group, please send an email to cdi@usgs.gov.
