

# Filtering by USGS Site

**USGS Site number:** Each site in the USGS database has a unique 2- to 15-digit identification number, and a unique name.

- You may browse for and select **individual sites** or **multiple sites**
- You must **enter at least 3 characters** in the 'Site Number (starts with) OR Name (contains)' box to display a list of sites
- Selecting a **state is optional**, but may help focus the list of available sites
- Entering new search criteria will not erase your existing list of selected sites, but will allow you to find and select a variety of sites more quickly
- You can also '**Upload sites from File**' using a space or tab-delimited **text file** that contains a column with Site Numbers with or without an agency code. Please [contact us](#) if you have any questions about using this feature.

*Example of file contents with Agency Codes and USGS site identification numbers:*

```
USGS 05572000
USGS 11447650
USGS 394523084582301
```

- Note that many USGS Site numbers have **leading zeroes**

390946106035300 - SHEEP RIDGE COLD SPRING	
392440106150400 - E F EAGLE R AB SHEEP GL NR CAMP HALE	

**Upload Sites from File:** You may also browse for and upload a text file containing a column with Site Numbers, one per line (i.e. "04087000"). The file may also contain a column with an Agency Code, one agency code and Site Number per line (i.e. "USGS 04087070" separated by a space or tab). The sites uploaded will automatically append to the Selected Sites list above.
