

SWWG Semantic Web Applications

Examples of Web Applications Using Semantic Technologies

Earth Sciences Semantics Portal

The ESSP provides open and persistent access to ontologies for experimental, observational, and computer modeling data in the Earth Sciences. ESSP ensures quality, curation, and long-term persistence of ontologies to support multidisciplinary science and transcend domain boundaries from environmental science to ecosystems and climate modeling. ESSP also provides tools to efficiently use semantics for data and metadata discovery, annotations, and mappings between metadata schemas.

SIG.MA

"Sig.ma does on the fly, interactive information visualization with bits coming from up to hundreds of sources at the same time. Sig.ma pages have permalinks and can be embedded in web pages."
