

# Delivery of real-time information

Point of contact: Jake Weltzin ([jweltzin@usgs.gov](mailto:jweltzin@usgs.gov))

Type of session: Breakout discussion

Description:

As for other disciplines within USGS (e.g., NWIS), the biological sciences should consider opportunities to deliver real-time or near real-time biodiversity information, in a variety of formats depending on the data, information or potential user or stakeholder. I'd be interested in a set of short demo talks from a variety of disciplines that discuss opportunities and challenges to delivery of real-time data, followed by a working session that could brainstorm, then prioritize, a set of actions we could take to improve our ability to delivery biodiversity information in near real-time. These recommended actions could inform the subsequent development of a CDI proposal..

Ideas for participants:

- Breeding Bird Survey
- Great Lakes Deepwater Monitoring Program
- NWIS
- Earthquakes
