

# Simulation Model Archiving

This might fall under a couple of other previously proposed sessions (DMPs for Science Centers, Data Sharing) but I would be interested to hear about state of the union on policy around this, things authors are actually required to do, encouraged to do, discouraged from doing, and suggestions for workflows and BMPs (with a focus on enterprise tech). Would like to clearly understand what's required of me as an author right now and what I might expect to see over the next year or two.

One topic of interest from a DM perspective would be whether we need to start evolving metadata models and requirements from stuff like FGDC CSDGM to encompass or federate w/CF or other specs or lines of thought.

POC: Roland Viger
