

# USGS “Science on a Screen” for Parks, Schools and Museums

USGS has a wealth of interesting, real-time, place-specific information on earthquakes, volcanoes, water, satellite imagery, and more available online.

What if we created an easy-to-configure, easily understood, place-based scheme for displaying our science on Internet-connected screens and kiosks in National Parks, state parks, grade schools, and natural history museums?

We'll discuss how we might create integrated, relevant, local data displays for general audiences.
