

# Bitbucket modules

Many topics were not covered in this introductory training for lack of time.

These modules are geared toward USGS Bitbucket Server and the SourceTree desktop client.

If a module is not linked yet, check back later. 😊 (This may call for future training events.)

- Case 1: Placing a local folder under version control and making accessible on Bitbucket
- Case 2: Obtaining someone else's code from Bitbucket
- Case 3: [Creating personal repositories on Bitbucket](#)
- Case 4: Understanding Repository Best Practices
- Case 5: Working on a team to edit a repository
- Case 6: [Making a nicely formatted README in Markdown](#)
- Case 7: Importing or mirroring a GitHub repository in Bitbucket
- Case 8: Migrating an existing software project into Git
- Case 9: Exploring [GitHub.com](#) and some cool visualization and connected app features
