

GeoProcessing Service Extension

Geoprocessing services contain geoprocessing tasks, and a task takes simple data captured in a web application, processes it, and returns meaningful and useful output in the form of features, maps, reports, and files.

Properties

Property	Type	Description
className	String	= "gov.sciencebase.catalog.item.facet.GPSFacet" A discriminator used by the system to identify the extension type
gpsCapabilitiesUrl	String, URI	The url of the GeoProcessing Service.
attributes	Map<Object, Object>	
gpsParameters	List<GPSParameters>	

Example

```
{
  className: "gov.sciencebase.catalog.item.facet.GPSFacet",
  gpsCapabilitiesUrl: "http://irmaservices.nps.gov/arcgis/rest/services/NPSData/NPS_Boundaries_WebMercator_labelfree/MapServer",
  attributes: {},
  gpsParameters: []
}
```
