

CRUD Operations on Items

CRUD Operations on Items

CRUD (Create, Read, Update, Delete) operations on ScienceBase Items can be performed RESTfully using HTTP Methods:

POST - Create
GET - Read
PUT - Update
DELETE - Delete

To perform any change operation (anything but GET) you must be logged in. The POST and PUT operations currently support JSON only and the requests must be properly formatted. You can also upload files from Groovy using the PUT method on an item that already exists.
