

Call for participation in a DOI invasive species data managers' community of practice

The [results](#) from a DOI level ad hoc work group on invasive species data management suggested that forming a **community of practice** would help **invasive species data managers** from across the Department better communicate about issues that are important to them, such as

- standards
- data types
- data integration
- data systems
- training
- citizen science
- hardware and software

The CDI offers a data-friendly environment for the advancement of an Invasive Species Data Managers' Community of Practice.

Please consider this a call for interest, and leave a comment if you are interested in joining this newly-forming community of practice, to be co-led by Lisa Thornley (BLM), Nate Bush (FWS), and Annie Simpson (USGS).

Next organizational teleconference is Monday, June 17th, 11 AM ET.
