

Example collaboration forum post: Integrating sediment transport and hydraulics datasets

I'm interested in connecting with people who are running flume/laboratory/field experiments or measurement campaigns in sediment transport or hydraulics, especially those that collect any type of bedload transport, for a project that will make it easier to document, integrate, analyze, and reuse these data types using existing USGS tools.

For this project, I'd also be interested in connecting with anyone with lots of experience helping project-team members with Jupyter notebooks.

I am hoping to span the Water, Hazards, and CSS Mission Areas with this project.

Please contact me at lhsu@usgs.gov if you would be interested in collaborating or know of contacts/resources. Thanks!
