

CDI Playbook

Introduction to the Playbook

The Community for Data Integration playbook is a collection of the strategies, procedures, and activities of the CDI. This is a public, living document intended to help our community members, coordinators, and current and potential partners understand the community and members we serve. It is not intended to capture every process, but to give an overview and point to the ways in which you can learn more. This playbook was developed in 2019 and will be updated annually.

The playbook was developed as part of the Community Engagement Fellows Program, run by the [Center for Scientific Collaboration and Community Engagement](#).
